RESUME

Computer Science graduate from USP with hands-on experience in React, Next.js, TypeScript, and agile methodologies. I've contributed to the development of responsive and accessible interfaces as part of multidisciplinary teams. I'm well-versed in UI/UX best practices, automated testing, API integration, and Git version control. I'm looking to contribute to projects that combine technology, design, and meaningful impact.

SKILLS

Languages & Frameworks: JavaScript (ES6+), TypeScript, Node.js, React, Next.js, Tailwind, Redux, CSS3, SCSS, HTML5

Tools: Figma, Git, GitHub Actions, Postman, CI/CD

Other: UX/UI Design, Responsive Development, Agile (Scrum), Clean Code

PROFESSIONAL EXPERIENCE

Fullstack Dev Intern

Opus Software, São Paulo, August, 2022 - September, 2023

- Built user interfaces for a client's web platform using React, TypeScript, HTML5, and CSS alongside the frontend team.
- Developed reusable components with a focus on code scalability and consistent visual design across screens.
- Participated in agile sprints with product and design teams, managing tasks via Jira and collaborating through Git version control.
- Implemented and tested RESTful APIs in the backend using Java (Spring), validating authentication flows and ensuring seamless frontend integration.
- Applied user-centered design principles to align features with client and end-user needs.

Frontend Developer

Octobit Jr. (Junior Enterprise), October, 2023 - August, 2024

- Designed interactive prototypes in Figma and developed them with Next.js for client presentations, directly contributing to new project acquisition.
- Collaborated with designers and analysts to turn UX requirements into functional interfaces, emphasizing visual clarity and accessible navigation.
- Built reusable pages and components using Next.js, TypeScript, and CSS, ensuring consistent standards across multiple internal projects.
- Applied accessibility and responsiveness best practices, adapting visual structures for various devices and user profiles.

PROJECTS AND AWARDS

Undergraduate Research - Game Design and Accessibility

Universidade de São Paulo, August, 2021 - August, 2022

- Developed a prototype for an educational game that translated scientific content about RNA vaccines into an interactive experience.
- Designed and implemented game mechanics using Construct 3, with an emphasis on visual clarity and usability for diverse user profiles.
- Applied accessibility principles and user-centered design to make the content more inclusive and effective for learning.

Second Place - R. U. Hacking? Hackathon

Reading University, UK, 2021

- Built a prototype of an interactive app to gamify the fight against misinformation.
- Contributed to project architecture, game logic, and data analysis using Python.
- Awarded 2nd place among several international teams for innovation, purpose, and quality of the proposed solution.

EDUCATION

Bachelor's Degree in Computer Science at Universidade de São Paulo

January, 2020 - December, 2024
